Ashland introduces new, patent-pending technology for Nutrapress™ organic chewable base dietary supplements, in one-step system for easy formulation

WILMINGTON, Del., March 9, 2022 – Ashland is introducing Nutrapress™ organic chewable base, designed for chewable dietary supplements. This organic chewable base is a complete system for nutraceuticals manufacturers and contains an organic binder, sweetener, flow aid, and lubricant. Ashland created this innovation with a patent-pending technology. Nutrapress™ organic chewable base has good powder flowability and compressibility which makes it ideal for the direct compression of chewable tablets.

“Consumer demand for organic products continues to rise,” said Maxine Weber, director of marketing, nutraceuticals, Ashland. “Replacing conventional ingredients with organic ones can be a challenge. Ashland solvers have developed an organic chewable base system that amplifies the efficacy while refining the usability of our customers’ products to reliably and efficiently produce organic chewable tablets.”

Nutrapress™ organic chewable base is available in sugar and sugar-free versions. Both chewable bases comply with USDA organic standards, and comply with European, Canadian and Korean organic requirements. Both versions are allergen-free, xylitol free, and vegan and vegetarian suitable.

Nutrapress™ organic chewable base is just one of Ashland’s many solutions for organic products. To learn more about the company’s portfolio of organic products, visit Ashland at the Natural Products Expo West, booth 3721 or visit www.ashland.com/chewablebase
